

## The Burden of Diabetes in lowa

Diabetes is an epidemic in the United States. According to the Centers for Disease Control and Prevention (CDC), over 34 million Americans have diabetes and face its devastating consequences. What's true nationwide is also true in lowa.

## lowa's diabetes epidemic:

- Approximately 225,000 people in lowa, or 9.3% of the adult population, have diagnosed diabetes.
- An additional 70,000 people in lowa have diabetes but don't know it, greatly increasing their health risk.
- There are 820,000 people in Iowa, 34.1% of the adult population, who have prediabetes with blood glucose levels that are higher than normal but not yet high enough to be diagnosed as diabetes.

Diagnosed diabetes costs an estimated \$2.6 billion in lowa each year.

The serious complications include heart disease, stroke, amputation, end-stage kidney disease, blindness—and death.

Every year an estimated 15,000 people in lowa are diagnosed with diabetes.

## **Diabetes is expensive:**

People with diabetes have medical expenses approximately 2.3 times higher than those who do not have diabetes.

- Total direct medical expenses for diagnosed diabetes in Iowa were estimated at \$2 billion in 2017.
- In addition, another **\$650 million** was spent on **indirect costs** from lost productivity due to diabetes.

## Improving lives, preventing diabetes and finding a cure:

In 2019, the National Institute of Diabetes and Digestive and Kidney Diseases at the National Institutes of Health invested \$12,211,608 in diabetes-related research projects in Iowa.

The Division of Diabetes Translation at the CDC provided \$994,496 in diabetes prevention and educational grants in Iowa in 2018.
