AFP: Precision Manufacturing for the Highest-Quality, Ultra-Reliable Valves

AFP's manufacturing capabilities produce high-quality, ultra-reliable rotary valves, diaphragm valves, and accessories that minimize leaks and downtime in chromatography systems. Our valves go through meticulous quality control and 100% testing to eliminate the need for OEM pre-production inspection and validation. This rigorous quality process ensures uninterrupted manufacturing flow for OEMs plus less maintenance and lower cost of ownership for end-users. AFP is the preferred supplier for customers desiring the highest-quality chromatography valves and accessories that offer superior performance in the most challenging environments.

Elegant, Efficient Fluidic Solutions that Generate Unimagined Instrument Performance

AFP's ability to create complex fluidic solutions allows OEMs to push their instruments' performance to previously unimagined levels. Our application of advanced design and manufacturing methods enable clinical diagnostic and genomic systems that generate higher sensitivity, superior accuracy, and greater repeatability. A single-source provider, AFP has the accountability and deep expertise that save time and mitigates risk. We conceive elegant, efficient manifolds and assemblies that drive diagnostic and research instruments to performance never thought possible.

AFP's Legacy of Precision and Ultra-Reliability

AFP's story began in 2006 as part of Contrôle Analytique Inc., a company manufacturing gas chromatography (GC) analyzers. We had to develop our own high-performance GC valves to ensure the purity and accuracy required in analytical processes. In 2008, we divested the GC systems business, rebranded the company as AFP, and focused on high-quality valves that solved the industry-wide problems of leaking and contamination. AFP was acquired by APN Global in 2016, and both companies were purchased by Schivo in 2022, enabling increased production capacity to meet rising worldwide demand. Today, AFP is part of a thriving Schivo Group that has more than 500 employees at five global manufacturing facilities.

AFP's products are readily available and easy to purchase online at www.afproducts.ca. Contact sales@afproducts.ca or for inquiries call **+1-418-338-0004**.

Gas Handling

Diaphragm Valves

AFP specializes in the design and manufacture of complex chromatography measurement valves for the instrumentation, laboratory, scientific and industrial markets. Our solutions incorporate innovative patented technologies that ensure consistent and extremely precise measurement and they are the choice of the world leading companies in the field. Manufactured with the best technologies available and calibrated and controlled by an expert team dedicated to perfection, our analytical products represent a reliable and affordable option for any company subject to the increasingly stringent requirements of the modern world.

High-Performance GC Diaphragm Valve The only one with an embedded patented purge system.

- Unique patented purge feature
- Valves to fit your application
- The only diaphragm valve for vacuum application
- Real-time health monitoring
- Available with no-purge option except MDVG series

The GC diaphragm valve family is available with multiple configurations to answer to your specific needs. We offer different valve head materials such as SS-316l, hastelloy® and more. We also offer coatings like silconert® 2000 and dursan®. Our valves are rated from 150 to 500 psig but can be tuned up to 1500 psig if required. Actuation pressure is normally 65 psig but can be lowered if needed. Custom requests are welcome.

ELDV1

Standard Mini-Diaphragm Valve
Purge And No Purge Options

LT version: Max 100 oC
Pressure: Max 150 psig
Port Sizes: 1/16"
Cross-port leak rate
Max Pressure: 1×10^{-9} atm-cc/s He

ELDV2

High-Performance Mini-Diaphragm Valve
Purge And No Purge Options

LT version: Max 100 oC
MT version: Max 180 oC
Pressure: Max 300 psig
Port Sizes: 1/16"
Cross-port leak rate
Max Pressure: 4.7×10^{-11} atm-cc/s He

MDVG

Premium-Grade Mini-Diaphragm Valve
Purge And No Purge Options

LT version: Max 100 oC
MT version: Max 180 oC
HT version: Max 250 oC
Pressure: Max 500 psig
Port Sizes: 1/16"
Cross-port leak rate
Max Pressure: 1×10^{-11} atm-cc/s He

ELDV/MDVG Series Configuration (for other configurations, contact us)

Series	# of Port	→ Connection	Temp	→ Model
ELDV1	06	16 = 1/16	LT = 100 oC	0005
ELDV2	10		MT = 180 oC	0007
MDVG	14		HT = 250 oC	0025 0030

*Covered by Pat# 7,931,043 - 8,104,506 - EP2331858 and (5) patents pending.

The Only One With An Embedded Patented Purge System. Finally, GC valves that allow your highly sensitive detectors to unleash their full potential.

Diaphragm based chromatographic valves have been around for more than a half century. Originally, they were in use in BTU analyzers and hydrocarbon measurement GC. With time, their size and built-in actuator feature made them attractive for other applications. Unfortunately, their sealing performance and problems associated with atmospheric diffusion through diaphragm have limited their usage. Users had no choice but to stick to conical rotary valve.

Now, this situation is behind us, thanks to all the innovative concepts we introduced in GC diaphragm valve technology.

Indeed, we are providing an entirely new set of performance parameters, which is many times greater than those found in today's market, with a sizable reduction in cost. Indeed, the valves shown in the following section overcome all the problems of previous diaphragm valve designs. They perform better and longer than GC rotary valves. In fact, the new valves can be used instead of GC rotary and sliding valves for most applications, with the exception of a few specific cases.

The unique purging feature, actuator design and assembly procedures result in an outstanding level of performance. Choice of performance grade, multiple ports fitting configuration and the possibility of custom designs allow maximum flexibility to instrument manufacturers and integrators.

THREE SERIES: ELDV1 / ELDV2 / MDVG

ELDV1	Standard level of performance, optimized for cost sensitive applications.
ELDV2	High performance level, better leak performance and lifetime, at medium cost.
MDVG	Premium performance grade, low, medium and high temperature grade.

Features and Benefits

Purge

Add some intelligence to your system with real time valve smart diagnostic capability

- Eliminates permeation and diffusion for low level trace measurement.
- Eliminates inboard/outboard contamination. There are no fugitive emission.
- Creates an inert atmosphere underneath the diaphragm for hazardous application.
- Allows vacuum operation by balancing pressure over and under the diaphragm.
- Allows real time monitoring of valve condition by verifying the purge outlet quality.

This unique purging feature makes GC instrument much more reliable.

Relief Pins

- Eases the process of diaphragm replacement in the field by pulling down all plungers.
- Relief pins remove stress on diaphragm for long term storage.

Diaphragm Design

- Mutli-layer diaphragm.
- Optional coating / metallization.
- Choice of material.

Plunger Design

- Precisely machined in metal.
- Tight length tolerance.
- Patented self aligned compressible (spring return), two-part-plungers.
- Tied base plunger design.
- Valve can be operated in any position. Plungers will not stick, and there is no friction.
- Force is applied to the total plunger surface area.
- Uniforms sealing force on the diaphragm.

3 Choices of Performance Mode

ELDV 1 Standard and ELDV 2 High-Performance Grade GC Diaphragm Valve

Mission critical applications demand the best available product, but not every system requires the Premium Grade MDVG series. This family of chromatographic diaphragm valves have been designed to fill the need for standard and high performance specifications.

The ELDV series will fill the need of most bench top laboratory GC while providing a high level of sealing performance and lifetime, better than the standard GC rotary valve generally available on the market and this at a lower cost and better offering value.

Description

The user may choose only the configuration option needed, contributing to a further cost reduction. The valve is available in two (2) configurations, ELDV 1 and ELDV 2.

ELDV Series Configuration

- Aluminum actuator body, SS-316L valve head
- Both configurations are purge, as per premium grade MDVG series, but can also be ordered without purge. See purging description section to understand the purge concept and its benefits.

Selection Guideline

- ELDV1 (standard grade): Optimize for cost sensitive application.
- ELDV2 (high performance grade): Better leak performance and lifetime at medium cost.

MDVG

Premium Grade, GC Diaphragm Valve

It allows higher pressure and temperature operation. It is also available with VCR 1/8" fittings. This is the choice for mission critical applications, process GC, fast temperature cycling and where a special coating is required. Ideal for sensitive GC/MS vacuum application.

Actuator Type

ELDV/MDVG

Standard actuator type i.E. pneumatic, single acting

This standard version is in use in most of the ELDV / MDVG-series valves. It's based on a single acting pneumatic actuator, supplied by an only inlet actuation port. When pressure (60-65 psig) is applied, the normally open piston and plungers will move up closing connections between ports, while the normally closed piston and plungers will go down opening new connections. The non-mixing time is determined by adjusting the compression of the belleville washer stack. The non-mixing time is defined as the time that all plungers are up during the actuation process. This make sure that there is no cross-port flow contamination during actuation. Indeed all ports are isolate before to move to next position. This is true when actuating and deactuating the valve.

Flow Paths

Conventional Flow Path

The conventional flow path is the most common one used in gas chromatography. The main benefit of this configuration is to never interrupt the fluid, upon normal operation. So, fluid is continuously flowing in all ports, whether the valve is actuated or not. This particularity comes from the fact that actuation plungers are stopping the flow between the ports, instead of acting directly on the port.

ISL - Internal sampling loop

The internal sampling loop is available in all models and the size of the sampling loop is available in 1.0 uL and 2.0 uL, contact AFP to discuss other volumes. There is also the double internal sampling loop diaphragm valve. It can be configured in two different modes i.e. alternate or simultaneous. The ADSL version (Alternate Double Sampling Loop) will inject the two samples on an alternate base. On the other end we also have the SDSL version (Simultaneous Double Sampling Loop) that will inject both samples simultaneously. We offer the possibility to have different size of sampling loop in the same valve in a range, be sure to contact AFP to discuss application. It is also possible to have one internal sampling loop and one external on the same valve head. Useful when the instrument measuring range must be change in real time.

GC Diaphragm Valves Performance Specifications

- Longer lifetime, and better performance than rotary valves.
- Eliminates/reduces detector upset and valve artifacts.
- Allows new GC methods, not possible with commercial GC diaphragm valves.
- Includes all fittings, adaptors and mounting clamps.
- Parts traceability.

ELDV Series		MDVG Series
Standard grade, low temperature	High performance grade, medium temperature	Premium grade valves high pressure / high temperature

NOTES :

1. Working pressure of the internal sampling loop configuration is available up to 1500 PSI. Please see ISL section.
2. AFPD-1 and AFPD-2 refer to the diaphragm type being use in the valve. Special surface treatment is also involved. Be sure to always use your valve with the specified diaphragm type.
3. Leak rates are verified at maximum operation conditions with an AFP® proprietary online leak detection system.
4. Lifetime of valve can be affected by sample chemistry and temperature of operation.
5. Standard material is SS 316L, Hastelloy is also a common one. Silcotek coating are also available. High temperature grade, HT, have the valve head with special coating.
6. Standard port fitting are 1/16" and 1/8" VCR could be ordered with a minimum quantity.
7. Other port size are available like .010" for capillary column application.
8. Standard actuation is the pneumatic single acting (spring return) type, with a single actuation inlet port.
9. See specific valve configuration (i.e. LT, MT, HT or vacuum) for proper actuation pressure.

Ex: MDVG-6-16MT-0-0

Mini Diaphragm Valve Grooved, with purge, 6 ports of .030", Fitting 1/16", 180°C, 500 psi, diaphragm AFPD-2, All SS-316L valve.

***Lip Seal:** Lip Seal fitting is our new patent pending AFP fitting detail. This reduces the dead volume, eliminates the rotation of the ferrule and improves the sealing resulting in an improved connection for valve and fitting. This is very beneficial for any analytical high sensitivity instrumentation. Sealing integrity of a VCR fitting with the flexibility of a compression fitting.

OPTION

S = Silconert 2000 is a surface treatment recommended for the analysis of ppb levels of organo-sulfur compounds and mercury. It reduces the surface adsorption of active compounds on steel.

D = Dursan is a coating designed to improve inertness and corrosion resistance of stainless steel. Ideal for H₂S, mercaptan, ammonia, HCl and other corrosive compounds.

V = Vacuum operation configuration.
HC = Valve head made of Hastelloy®.
P10 = Valve head with .010" Ports Size.

Clamp Ring

Part number: CR-MDV

Tool Kit (This include all the tools and spare relief pins to do the maintenance i.e. replacing a valve head, diaphragm, actuator)

Part number: TK-01

MRV series

- Sample injection and switching 2 positions rotary valves
- Standard valves work up to 400 Psi
- Maximum temperature 225°C
- Individually tested for leaks at ppb level
- Longer lifetime due to our patented double stopper designed
- Drop-in replacement with all GC valves available on

The Market

In many applications where a purge was not necessary and space inside instruments was limited, there was a need for a small form factor rotary valve. The MRV was designed from our purged rotary valve series (RVP series) where our embedded purge system made this valve slightly bigger. The MRV series has several patented features making it so reliable: double stopper, etc. like the double stopper, coated guide bushing drive adaptor, anti-rotational dowel pins and treated rotors.

MRV series (non purged)

Available with 4, 6, 10 and 14 ports, Internal sampling (LSV)

Port size available: 1/16"

Rotor R2 (modified PEEK)

T = ambient to 225°C

Pressure: 425 psig

MRV Configuration (for other configurations, contact us)

Series	# of Port	→ Connection	Rotor	→ Model	Standoff	Actuator
MRV	04	16 = 1/16	R ₂ = 225 oC	0006	C = Close mount	M = Manual
	06		R ₃ = 350 oC	0007	2 = 2"	P = Pneumatic
	10		0019	3 = 3"	E = Electric	
	14		4 = 4"			

Rotary Valves: MRV-HT Series

The MRV-HT high-performance rotary valve extends your chromatography applications up to 350°C. The rotor (R3) in the MRV-HT is constructed with a PFAS-free high-temperature polyimide/ graphite composite. This rotary valve solves the common issues of current high-temperature valves, sudden failures due to rotary stripping, and while eliminating complex reconditioning procedures.

The MRV-HT Advantages

- Ideal for applications that require temperatures in the range of 225°C to 350°C, with the optimal temperature being 330°C
- Allows for up to 50 actuation cycles at room temperature without damaging the rotor/sealing for instrument tuning and leak testing
- No reconditioning is required to tune the system, which leads to faster installation times
- Compatible with AFP pneumatic actuators and electrical actuators (MEA-I) in an assembly using a standoff
- 6 or 10 port
- Certified up to 300 psi gas
- PFAS Free

The MRV-HT Extended Advantages

- Hexagonal preload design for improved maintenance.
- Extended lifetime: more than 80,000 cycles at 330°C.
- Capable to extend the temperature range of operation: 80°C - 350°C.

Dimensional Information

The **Standard MRV-HT** model is designed for instruments where the drop-in-replacement factor is critical. When the dimensions are not the limiting factor and there is clearance on the length of the valve, the **Extended model** can be used, as it will provide additional range of temperature and extended lifetime.

Increased Productivity for Gas Analysis

The ideal temperature for the MRV-HT valve in terms of lifetime value is 330°C, but the MRV-HT can perform at higher temperatures of up to 350°C with only a 15% reduction of service in the lifetime tests. In a comparative study of AFP's MRV-HT with a similar high-temperature valve currently on the market, the R3 rotor achieves almost four times more actuation cycles than its competitor at the maximal continuous operation temperature that the competitor's valve can withstand (330°C). With the addition of the Extended MRV-HT model, the lifetime of the high temperature valves is further pushed to another level. This new model is capable to achieve more than 10 times what the common high temperature valves can do.

Lower Total Cost of Ownership

The R3 rotor's material was selected by AFP to allow end users to turn off the oven and resume their analytical analyses without compromising performance. The MRV-HT's hexagonal preload design improves access to the rotor, speeds up the maintenance process, and reduces instrument downtime.

Extensive cycling at temperatures below 225°C are not advantageous for the MRV-HT rotor, as its performance does not compare to the medium temperature rotor (AFP-R2).

AFP recommends the usage of the MRV-HT valve at applications with temperatures higher than 225°C to obtain its full benefit.

MRV-HT High Temperature Rotary Valves and Replacement

RVP Series

AFP's Purged Rotary Valves for Gas Chromatography systems feature a patented **real internal purged rotor** design. This feature eliminates the need for an external purged housing, or multiple o-ring seals that increase the risk of atmospheric contamination due to tendency to wear by friction under normal valve operation.

Features

- 6 or 10 port
- Certified up to 225°C
- Certified up to 325 psi gas
- Compatible with AFP actuators and accessories
- The purged rotary valve can be offered with inert coatings (Dursan®)

RVP Advantages

- Does not require an external purge box or purge housing
- Cost saving/space saving
- All RVP valves are leak-tested and certified at no additional charge

Figure 1. Valves dimensions.

Innovative Design

The patented design of the AFP's Purged Rotary Valve, including guiding pins and double stoppers, prevents inboard/outboard contamination and allows for ppb and trace detection limits.

Lower Total Cost of Ownership

AFP's Purged Rotary Valves are designed with lower total ownership costs in mind. No external purge box is required, which simplifies the design and creates a smaller footprint. No external o-rings are used in the valve, which removes failure points. The Purged Rotary Valves are developed to be compatible with AFP's standoffs and actuators, which allows for an easy upgrade for current systems.

Contact AFP for information on cables, power supply and other configurations not mentioned in this document.

MEA-I

AFP's MEA-I is a compact electrical actuator that works with any AFP rotary valve. The intelligent design of the MEA-I automatically detects the number of ports in a two-position valve. It eliminates the need for multiple devices as it operates in fast actuation or high torque. The actuator is also low power consumption, more than energy-friendly allows for firmware updates via serial communication.

Figure 1. Characteristic assembly.

Features

- 2 modes, fast actuation or high torque by serial command
- Compatible with MRV and RVP rotary valves
- CE approved
- MEA utility software for easy operation of the actuator
- Integration with OEM protocols on request.
- Multiple run time information: track the number of boots, configurations, actuation, etc.
- Status LED for feedback
- Serial Communication features are multi-user, compatible with the AFP product family, easy to use text command (ASCII), and has a return parameter to confirm command execution.

The MEA-I Advantages

- Eliminates the need for multiple actuators through multiple modes, fast actuation, or high torque
- Compact design, 30% smaller than the previous version
- Detects and adapts to the number of ports in a two-position valve by initialization process; easy switching from 4 ports to 14 ports with an auto-configuration button
- Direct replacement for current 2-position electrical actuators on the market

Figure 2. MEA-2000 dimensions.

Contact AFP for information on cables, power supply and other configurations not mentioned in this document.

Mini Pneumatic Actuator

The mini pneumatic actuator (MPA) allows any of the AFP two-position rotary valves to switch positions by introducing pulses of air into the actuator using a solenoid. The air goes through the two ports identified as 'Port A' and 'Port B' on the MPA.

Various standoff assemblies can be used to mount the two-position rotary valves on the MPA. As a result, the user can isolate the actuator from the valve outside a heated area. AFP standoff assemblies come in 2", 3" and 4" lengths.

The MPA has three fixing threads (M4x0.7 mm), which can be used to mount the actuator on a plate. They are located on the 'Port B' face of the MPA.

MRV series

- Sample injection and switching 2 positions rotary valves
- Standard valves work up to 400 Psi
- Maximum temperature 225°C
- Individually tested for leaks at ppb level
- Longer lifetime due to our patented double stopper designed
- Drop-in replacement with all GC valves available on

The Market

In many applications where a purge was not necessary and space inside instruments was limited, there was a need for a small form factor rotary valve. The MRV was designed from our purged rotary valve series (RVP series) where our embedded purge system made this valve slightly bigger. The MRV series has several patented features making it so reliable: double stopper, etc. like the double stopper, coated guide bushing drive adaptor, anti-rotational dowel pins and treated rotors.

MRV series (non purged)

Available with 4, 6, 10 and 14 ports,
Internal sampling (LSV)

Port size available: 1/16"

Rotor R2 (modified PEEK)

T = ambient to 225°C

Pressure: 425 psig

Stream Selection

DV Series

This is the first real analytical tight shut-off diaphragm valve. It has multiple uses in gas chromatographic systems, autosamplers, sampling and general instrumentation. No dead volume effects, continuous flow path and purge systems make it ideal in many situations. From simple three-way to complex configurations with timing sequences, the job is easily done. Wide choice of configurations, from simple pneumatic actuator to fully loaded microprocessor-controlled electrical actuator. The valve head is made of SS-316l and can be coated with SilcoNert® 2000 and Dursan®.

Common Features Description

- Purge feature to prevent inboard/outboard contamination, fugitive emissions and permeation through the diaphragm (optional)
- 100% leak tested
- Elimination of dead volume effects
- Continuously swept flow path
- Tight positive port shut-off design
- Working pressures from vacuum to 1000 psig (or more)
- Usable with liquid or gas media
- Low pressure drop
- Independently controlled portst

Fields of Application

- Gas Chromatography / Liquid Chromatography / GCMS/LCMS
- On-line gas analyzer / various sampling systems
- Automated laboratory sample injection systems
- Sample preparation systems / sample concentration systems
- Continuous flow analyzer
- Purge and trap GC sampler / headspace sampling
- Total organic compound analyzer
- Automated process analyzer panel
- Refining and hydrocarbon analyzer / natural gas analyzer
- Ion chromatographic systems

Electric Actuation

Available for all the DV-Series Valves

Common Features

- Included diagnostic and configuration software
- Microprocessor-controlled motors
- Green power: consumes power only during actuation, sleep mode between actuations
- User-selectable default position; normally closed (NC) or normally open (NO), position selected on power up
- Servo loop torque controlled, compensating for long-term wear; maintaining sealing level over time

ON/OFF STREAM CONFIGURATION

SINGLE STREAM OPERATIONAL STATE #1

SAMPLE BY-PASS STREAM CONFIGURATION

SINGLE STREAM OPERATIONAL STATE #1

Applications

- Electrically controlled sample stream selection systems
- Analyzer auto-calibration systems
- Built-in analyzer sample and calibration gas selection
- Liquid autosamplers
- Sample panel automation
- Purge and trap systems
- GC front-end sample processing (concentration/purification)
- Syringe pump / dispenser / diluter systems

Other Valves

Flow Metering Valves

The new AFP needle valve was designed to provide a high resolution adjustment and sealing performance required in trace analysis.

Timing marks and screw driver compatibility on the body of this product provide the operator additional tools to achieve precise adjustment in laboratory and process gas chromatographs.

Advantages

- Better sensitivity for smoother adjustment.
- Stability over time, less drift caused by the adjustment knob.
- Available with Dursan® coating for H₂S

Needle Valves SKU

Product Description	AFP SKU	Competitor SKU
Flow Metering Valve, 1/16" fine adjustment, Viton, SS300, short nut, 10 µm frit, clear, lubricated, std configuration	FMV-16FA-VISS-00001	ZBNV1
Flow Metering Valve, 1/16" fine adjustment, Viton, Dursan® coated, short nut, 10 µm frit, clear, lubricated	FMV-16FA-VIDU-00001	N/A

High-Performance Analytical Fittings

Mini Electrical Actuator

- 316L Stainless Steel Wetted Parts Construction
- New Stackable Tees And Crosses
- Interchangeability
- No Dead Volume Effect
- Leak Tested
- No Clamp Ring Required For Mounting Tees And Crosses
- No Tubing Deformation

For several decades, fittings have been the same. Fittings are critical components of any analytical system. The level of sealing, dead volume or mechanical characteristics could vary dramatically based on manufacture process, even if externally they look the same. But don't get fooled; there are serious differences between them. Nothing looks more like a fitting than another fitting! Differences reside in details.

Standard Fittings

Here we are offering a line of fittings that have, by design, improved characteristics. Internal finish, ferrule design, thread finish are some of the characteristic that have been improved. Practical details, like stackable crosses and tees, eliminate the need of mounting clamps and allow space saving. Low torque column end fittings and unions make 1/8" OD and 1/4" OD size tubing assembly much easier and better.

Available in several materials and custom designs to fit OEM needs.

Pre-Cut Tubing

AFP has released its own line of pre-cut tubing for gas chromatography. These tubes are made from the highest-quality alloys such as SS-316L, Hastelloy C-22 to ensure maximum performance and corrosion resistance.

Why use pre-cut tubing? To save time upon assembly since it is always perfectly cut square, without burrs or contamination, and already passivated.

Internal coating options like SilcoNert 2000® for optimum inertness and corrosion resistance especially for H₂S application.

We offer a wide range of ID, OD and straight lengths.

Coiltube

We are also able to provide you the same quality seamless tube in coil. If you require any special length cut, just let us know and we will make you a quote.

1/16" OD	1/8" OD	Lengths
0.005" ID	0.085" ID	5 cm
0.010" ID		10 cm
0.020" ID		20 cm
0.030" ID		30 cm
0.040" ID		50 cm
		100 cm

*The volume in an orifice from an inlet port to the common port in the valve

Best Position Teaching: Uses flow during factory calibration to set port positions

Backlash Calc & Removal: Eliminates wear from extra movements

Predictive Seal Loss Monitoring: Ensure your valves do not wear out

Torque Sensing & Monitoring : Used for predictive maintenance and to detect other potential problems

Pressure Sensing + SPC Monitoring: Protect the system and avoid expensive clogs and bursts

Flow Sensing + SPC Monitoring: Ensure system performance every run

APPLICATIONS

- Genomics
- Proteomics
- DNA Sequencing
- Diagnostics
- Microfluidics

A Proven Source for Thermally Bonded Manifolds with 35+ Years of Experience

A diffusion bonded manifold is a type of manifold used in various industries, such as aerospace, automotive, and medical applications. It is created through a process called diffusion bonding, also known as solid-state welding or diffusion welding.

Diffusion bonding involves joining two or more components together without the use of additional filler material. The process typically involves applying heat and pressure to the mating surfaces of the components, causing atomic diffusion to occur at the interface. This diffusion results in the creation of strong bonds between the components, effectively joining them into a single piece.

In the case of a diffusion bonded manifold, multiple channels or passages are formed within the manifold structure. These channels are designed to facilitate the flow of fluids, gases, or other substances through the manifold. The diffusion bonding process ensures a high-integrity bond between the manifold components, resulting in leak-free operation and enhanced structural integrity.

Diffusion bonding offers several advantages for manifold fabrication. It allows the creation of complex manifold geometries with precise channel configurations, ensuring optimal fluid or gas flow. The absence of additional filler material eliminates potential points of weakness or contamination, enhancing the reliability and performance of the manifold. Additionally, diffusion bonding enables the joining of dissimilar materials, expanding the range of applications for these manifolds.

Overall, diffusion bonded manifolds are highly reliable, durable, and efficient components used in various industries where precise fluid or gas distribution is required.

What is our design and development partnership process?

Together, we can create a manifold assembly that will exceed your expectations. Let our experience become an extension of your design team.

What can be added to the Manifold?

- Chambers
- Specific volumes
- Pressure-controlled diaphragm valves
- Solenoid valves
- Sensors- pressure + flow
- Heaters and peltiers
- Optical clarity (for lasers, cameras, etc.)
- IERV Rotary valves, pressure relief valves
- Regulators
- Bubble detection
- Sub-assembly pressure, electrical, and leak testing

APPLICATIONS

- Diagnostics
 - Point of care
 - Lab Instruments
- Genomics
 - Proteomics
- Microfluidics
 - DNA Sequencing

AFP (ParMED) Trusted Valve Integrator:

AFP (ParMED) is a trusted valve integrator and distributor for SMC liquid handling products, providing precision-engineered solutions that ensure efficiency and reliability. Our expertise helps industries achieve seamless fluid control with exceptional quality and service.

Custom Engineered Plastic Manifold & Valve Technology

- Reduced Space and Weight
- Reduced Installation Work & Time
- Eliminate Assembly Error
- Reduced Cost of Ownership

Plastic Material

Diffusion Bonding	Acrylic Resin (PMMA), Polyvinyl Chloride (PVC), Polyetherimide (PEI), Polysulfone (PSU)
Machined	Polyetheretherketon (PEEK)

3 Port Solenoid Valve
Series S070

- 7 mm width
- Cv 0.011
- 0.1W power consumption

Pressure Switch
Series ZSE/ISE30

- 2-Colors Digital Display
- Space Saving
- High-Precision Resolution: 1/1000

3 Port Solenoid Valve
Series V100

- 10mm width
- Cv 0.016
- 0.1W power consumption

Flow Switch
Series PFM

- 2-Colors Digital Display
- Space Saving
- Flow Adjustment Valve

5 Port Solenoid Valve
Series SJ200

- Serial Transmission
- Low profile
- Manual locking

High Precision Regulator
Series IR

- Compact and Lightweight
- Repeatability $\pm 0.5\%$ F.S.
- Manifolding is possible

- Orifice 1.6mm
- Power consumption 1W (at holding)

LVM200

- 20mm width
- Orifice 2.0mm
- Power consumption 2.5W

Your Trusted Partner in Contract Manufacturing for Medical and Life Sciences

AFP, a Schivo company, is a contract design and manufacturing company that provides award-winning product design, development, and manufacturing services to the medical device and life science markets. Leveraging expertise in high-growth markets and a strong global presence, AFP offers unmatched capabilities to better serve client needs.

Bringing All Capabilities Together In One Place

To address your unique engineering challenges, create innovative manufacturing processes, and simplify the supply chain to support you at every step from concept to commercial launch.

Our Capabilities:

- **Precision Engineering**
Tailored design and development to meet high standards.
- **Complex Manufacturing**
Production of analytically clean components, ready for intricate applications.
- **Comprehensive Service**
Range From rapid prototyping to complex parts and assemblies, our dedicated engineers' partner with you from initial concept through full lifecycle management, ensuring every part meets the highest standards of quality.

Some examples of Contract Manufacturing Capabilities

- Electro-Mechanical Assembly
- Final Assembly
- Testing & Inspection
- Sterilization Management

Why Choose AFP?

Our experienced team begins with the end in mind, focusing on precise machining and inspection to ensure seamless assembly every time.

AFP's engineer-to-engineer approach ensures that you collaborate with a highly skilled engineer from the initial concept stage through every phase of the product lifecycle.
